Product Specific Information

Mature rat IL-2 was expressed in *Pichia pastoris*, X-33. GenBank Accession # P04351, amino acids 21 - 155. For protein verification, the expressed protein was N-terminal sequenced and begins with the following 10 amino acids: APTSSPAKET. Purity is >95% by SDS-PAGE analyses.

Activity: The biological activity of recombinant rat IL-2 was determined by measuring the proliferation of mouse CTLL-2 cells. The ED50 (or 1 unit of activity) for this effect is typically 3 ng/mL.

Use: For in vitro applications. A dose-response assay should be performed to determine the optimal concentration for specific experiments.

Reconstitution and Dilution: Store lyophilized material at 4°C. Reconstitute in 0.5 mL of distilled or deionized water. Dilute in a buffer-containing carrier protein, aliquot, and store at or below -70°C, avoiding multiple freeze-thaw cycles. PBS with 1% BSA or a neutral media containing <10% FCS are suitable buffers.
